- Access360
- Controller
- Reader
- EM Locks
- Biometric Device (Attendance & Temp Scanner)
- ezVisit Client Visitor Access Management
- Access360 Security Monitor Web Client

- • Integrator Monitor
- • Reporting
- • Add/Edit Staff Access Control
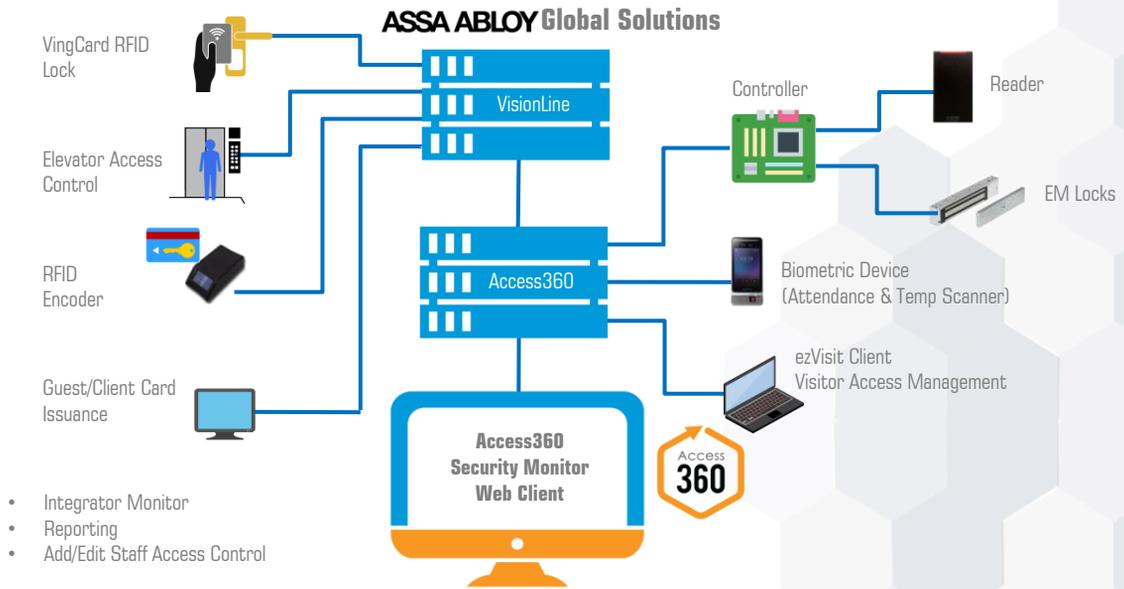

Benefits

Integrated Monitoring
Single window monitoring & management of the entire access control system, encompassing ASSA ABLOY Global Solutions' Visionline access management solution and the IDCUBE PACS comprising Access360 software application, readers & controllers.

For guests (visitors)	
Integrated Access	The integration facilitates the issuance of a single keycard to visitors for all access points, including guest rooms installed with the VisionLine access management solutions and common areas installed with the IDCUBE's PACS from one single window.
Visitor Access	The system simplifies physical access management of vendors such as carpenters, plumbers, etc., by systematic & digitized recordkeeping and issuance of a keycard for timed access.
New Identities	Allows hotel management to explore new forms of identities or procedures for hotel security.
Mobile App	Seamless integration with the hotel's booking software enables swifter access via mobile credentials by just flashing the mobile device instead of a keycard.

For staff (employees)	
Seamless Access	The unified system ease-out the assignment of access privileges for selected hotel rooms & back-office facilities with a single card.
Workforce Productivity Tools	The integration helps meet the hotel staff's time tracking/attendance requirements via the access keycard—option to choose from various identification technologies such as fingerprints, face recognition, hand wave, etc.
Vehicle Access Management	The Access360 provides seamless access to staff parking bays via automated boom barriers with the same key/access card.
Leave Management	In-built module for staff absence management to streamline HR processes and maximize productivity
