

Access360 & Security center Integration Note

IDCUBE, the provider of the world's first AI-powered physical access control solutions, has partnered with **Genetec**, a global leader in video management and physical security systems. This partnership delivers a unified platform that combines **IDCUBE Access360** with **Genetec Security Center**, creating a seamless and highly efficient security system. The result is a comprehensive solution designed to improve operational effectiveness by integrating real-time monitoring, rapid incident response, and enhanced investigations.

Architecture

Features

Seamless Integration with Genetec Security Center: IDCUBE Access360 integrates seamlessly with Genetec Security Center, allowing users to manage both access control and video surveillance from a single platform.

Live Video Monitoring in Access Control: Security teams can monitor live video feeds from Genetec cameras directly within the IDCUBE Access360 interface, offering real-time visual context for access control events.

Graphical User Interface (Floor Maps): The system features an intuitive graphical user interface that enables security personnel to easily place and visualize cameras on floor maps, providing enhanced real-time situational awareness.

Camera Mapping with Doors & IO Points: Cameras from Genetec's video management system can be mapped to access control points such as doors and IOs, enabling event-triggered video recording and real-time alarm mapping.

Stored Video Playback: Archived footage corresponding to specific access control events—like door access, perimeter breaches, or triggered alarms—can be reviewed for investigations and security audits.

Benefits

Streamlined Security Operations: By consolidating access control and video surveillance into one platform, IDCUBE Access360 and Genetec Security Center simplify security operations, reduce system management complexity.

Immediate Response Capabilities: Administrators can swiftly take action—such as locking or unlocking doors or activating lockdown protocols—while simultaneously viewing live video streams from cameras.

Reduced TCO: The integrated platform for access control and video surveillance streamlines operations, improves efficiency, reduces management complexity, and results in significant savings on the organization's total cost of operations (TCO).

Enhanced Incident Investigations: Mapped video streams to access control alarms allow security teams to quickly analyze events and investigate incidents with greater accuracy and understanding.

Improved Perimeter Security: Cameras connected to perimeter intrusion sensors are automatically highlighted, enabling quick responses to security breaches and supporting faster situational assessment.

Scalable and Flexible Solution: Both IDCUBE Access360 and Genetec Security Center are scalable with upgrades, allowing organizations to expand their security operations as needed while maintaining a unified and efficient system.

Conclusion

The integration of IDCUBE Access360 with Genetec Security Center provides a unified, powerful security solution that combines access control and video surveillance into a single platform. This comprehensive solution enhances situational awareness, streamlines operations, and enables rapid response to incidents, ultimately improving security outcomes and reducing operational costs.
